Equation	Solution
$\frac{1}{2}x + \frac{1}{3}y = 1$	$x = 2 - \frac{2}{3}y$
$2x + 3y = 6$	$2(2 - \frac{2}{3}y) + 3y = 6$
$4 - \frac{4}{3}y + 3y = 6$	$4 + \frac{5}{3}y = 6$
$\frac{5}{3}y = 2$	$y = \frac{6}{5}$
$x = 2 - \frac{2}{3}y$	$x = 2 - \frac{2}{3}(\frac{6}{5})$
$x = \frac{2}{5}$	$x = \frac{2}{5}$
$(\frac{2}{5}, \frac{6}{5})$	$(\frac{2}{5}, \frac{6}{5})$
$\frac{1}{2}x + \frac{1}{3}y = 1$	$\frac{1}{2}(2) + \frac{1}{3}(\frac{6}{5}) = 1$
$1 + \frac{2}{5} = 1$	$1 + \frac{2}{5} = 1$
$\frac{7}{5} = 1$	$\frac{7}{5} = 1$
$\text{The solution is } (\frac{2}{5}, \frac{6}{5})$	$\text{The solution is } (\frac{2}{5}, \frac{6}{5})$

## **6-4 Study Guide and Intervention**

## ***Elimination Using Multiplication***

**Elimination Using Multiplication** Some systems of equations cannot be solved simply by adding or subtracting the equations. In such cases, one or both equations must first be multiplied by a number before the system can be solved by elimination.

**Example 1:** Use elimination to solve the system of equations.

$$\begin{aligned}x + 10y &= 3 \\4x + 5y &= 5\end{aligned}$$

If you multiply the second equation by 2, you can eliminate the  $y$  terms.

Substitute 1 for  $x$  in either equation.

$$\begin{aligned}1 + 10y &= 3 \\1 + 10y - 1 &= 3 - 1 \\10y &= 2 \\\frac{10y}{10} &= \frac{2}{10} \\y &= \frac{1}{5}\end{aligned}$$

The solution is  $\left(1, \frac{1}{5}\right)$ .

**Example 2:** Use elimination to solve the system of equations.

If you multiply the first equation by  $-3$ , you can eliminate  $x$ .

Substitute  $-4$  for  $y$  in either equation.

$$\begin{aligned}3x - 2(-4) &= -7 \\3x + 8 &= -7 \\3x + 8 - 8 &= -7 - 8 \\3x &= -15 \\\frac{3x}{3} &= -\frac{15}{3} \\x &= -5\end{aligned}$$

The solution is  $(-3, -4)$ .

## Exercises

**Use elimination to solve each system of equations.**

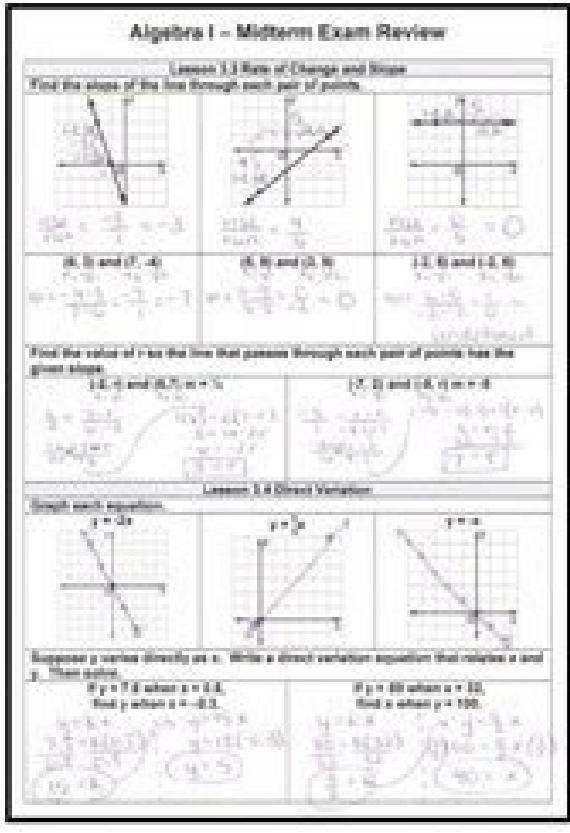

$$\begin{aligned}1. \quad & 2x + 3y = 6 \\& x + 2y = 5\end{aligned}$$

$$\begin{aligned}2. \quad & 2m + 3n = 4 \\& -m + 2n = 5\end{aligned}$$

$$\begin{aligned}3. \quad & 3a - b = 2 \\& a + 2b = 1\end{aligned}$$

My sixth grade task is divided into the following units: (1) Number of meaning (2) relationships, rates and percentages (3) Equations (4) Geometry (5) The Statistithis product contains 90 Google algebra forms perfect for distance learning, but it also works very well in a traditional classroom. The questions are organized by the following type:#1-3: sum#4-6: sub#7-8: real world situations Note: This task does not require multiplication first. The questions are all "shorts" so you may be reminded to be careful when writing your solutions in the form (x, and)- with parenthesis and without spaces. Linear equations using the removal method by completing this set of 11 problems. Created for a mini university algebra unit in linear systems and matrices. Resolving systems of equations by elimination multiplies & Solving equation systems for more digital activities Click Twin Twins Digital Twins Activities for more algebra activities Algebra Make sure you will follow the Master Twins Shop to get new products. or algebra students How to solve elimination equation systems? This form of Google is a unit of fully-matric units in pre-Calculusdo matrices, their students need help in solving equation systems, whether a system with 2 or more variables. . This product contains a multiple option version and a non-multiple choice version of the same set of problems. Integer Factors 7.
